PRESERVE365®
preserve your long-term records in Microsoft 365

The Digital Preservation Challenge

Organizations face increasing risks when it comes to preserving their critical long-term digital records. Traditional storage solutions fail to protect data integrity over time, creating vulnerabilities that lead to:

- **Data Loss & Corruption -** Files become unreadable as they degrade over time and as formats evolve.

- **Policy or Legal Mandate Noncompliance –** digital content has to be readable and trusted over the full retention period to comply with industry rules & legal mandates

- **Limited Accessibility -** Siloed systems prevent users from retrieving vital records.

- **Missed AI & Automation Opportunities -** Data remains static rather than actionable.

- **Costly Emergency Interventions -** Reactive IT management leads to unnecessary expenses.

The Solution: Preserve365®

Preservica's Preserve365®, embedded in Microsoft 365, provides a fully integrated, AI-ready digital preservation solution. Designed to seamlessly work with SharePoint, it ensures your records remain secure, compliant, and accessible forever. As a Preserve365® integrator, DocPoint is uniquely positioned to help organizations implement active digital preservation strategies that safeguard critical information for the future.

Key Benefits & Business Value

SECURELY ARCHIVE RECORDS - Maintain usability across evolving file formats and technologies in just a few clicks in SharePoint.

AUTOMATE POLICY COMPLIANCE - File readability is preserved, and provenance is verified, ensuring compliance with policies, industry rules, and legal mandates.

PREVENT DATA LOSS - *Automatically* protect against corruption, obsolescence, and accidental deletion.

IMPROVE SEARCH & RETRIEVAL - Enhance metadata for instant access to critical records.

ENABLE AI & AUTOMATION - Set it and forget it. Make your content AI-ready for future innovations.

EMBEDDED IN MICROSOFT 365 - Manage records natively within SharePoint and Microsoft 365.

Why Now?

Waiting increases risks and costs. Organizations that act now can:

- Avoid compliance fines and legal risks
- Reduce IT overhead and storage costs
- Ensure AI-readiness for the future
- Empower users with easy, secure access to records
